FISH pipeline

raw PSR data files

Extract CAL
(extract_crafts_cal.py)

CAL files (MJD, ON, OFF)

Calculate the Tsys,psr
(Tsys_cal.py)

CAL file list

interpolate along mjd

rebin ON-OFF along mjd

CAL_ON, CAL_OFF, ON-OFF

Concatenate

Tsys,psr=OFF*Tcal/(ON-OFF)

Read CAL
(read_crafts_cal.py)

Read Tcal
(read_crafts_spec.py)

resample along
frequency to match
the CAL spectrum

Tsys,psr file

Specify a frequency range

The mean Tsys,psr

Match Tsys,psr and Tsys,spec
(Match_Tsys.py)

raw SPEC data files

specify a frequency range

The mean Readout

The conversion factor between
Tsys and Readout

Read SPEC
(read_crafts_spec.py)

set line/RFI windows

Calibrated SPEC data files

Post processing

Apply the conversion factor
